

When two topics were released to choose from, the first one caught my eyes and set me thinking. Two Cheers for Made-in-China. Why two, was there one, or maybe there will be more?

As we all know, market-oriented reform and opening to the outside world promoted the development of the manufacturing industry . At the same time, the rapid development of economic globalization gave manufacturing the chance to expand on a global scale. Under those circumstances boomed the Made-in-China products around the world.

Toady you will find products with Made-in-China label not only in super markets, but also in all kinds of convenient stores. You will find them not only in kitchens but also in factories. You will find them not only in Middle-East, Africa and Latin-America, but also in America, Europe and all over the world.

However,yeah,important things always follow the damn 'however', have you ever noticed those made-in-china? Smartphones? No, it is said "designed in California" Cosmetics? No, they are always made in Korea. Cars, yes, made in China, but assembled by German production line.

The ordinary made-in-china products are nothing but cheap articles of daily use.Although our products enjoys the name of low price,they are seldom praised with the name of elegant modelling,

unique creation or humanity design. What's worse, those Shanzhai products sometimes even cause damage to people's lives and in turn is a fatal strike to our country.

Luckily, with the announcement of Made-in-China 2025 plan, our country will shift our competitiveness from low price to focusing on the upgrading of the manufacturing sector to improve innovation ability. Huawei, a private-owned company, has already overtaken Cisco, the former No.1 telecommunication company in the world and has great aspiration to overtake Samsung soon in mobile phone market. One day, we will see more and more companies as such with innovative technologies that are difficult to imitate or substituted.

So I hope in the near future, products used all over the world are not only made in China, but also created in China. On that day, we will hear more cheers for Made-in-China.
